VISTARA RETAILERS

BUSINESS ANALYSIS

Identifying Business Questions, Analytical Objectives & Management Priorities

Prepared by: **Mayank Goyal**

Understanding the Business

This document establishes the key business questions that will guide the analysis of Vistara Retailers' business performance. It focuses on understanding revenue trends, branch-level performance, product profitability, customer-related indicators, payment preferences and time-based transaction patterns.

Each question is accompanied by its business purpose, explaining why the analysis matters and what management can learn from the results.

The framework is divided into five analytical dimensions:

1. Overall Sales & Revenue Performance
2. Branch & City Performance
3. Product Category Performance & Profitability
4. Customer Behaviour & Payment Preferences
5. Time-Based & Transaction Analysis

SECTION 01

OVERALL SALES & REVENUE PERFORMANCE

Q1. How has the company's total revenue changed year over year?

Evaluate the company's overall financial performance, identify growth or decline trends, and understand whether the business is expanding or losing revenue over time.

Q2. Which months generate the highest and lowest revenue?

Identify seasonal sales patterns and peak and low-demand periods to support sales planning, promotional activities and resource allocation.

Q3. How does monthly revenue vary across different years?

Compare monthly performance across years to identify recurring seasonal trends, changes in customer demand and potential opportunities for improving sales.

Q4. What is the average transaction value (ATV) for each branch?

Evaluate the average spending per transaction across branches and identify locations where customers spend more or less per purchase.

Q5. Which branches have experienced the largest year-over-year decline in revenue?

Identify underperforming branches, quantify their revenue declines and prioritise locations requiring management attention.

Q6. What is the overall year-over-year revenue growth rate?

Measure the company's annual growth trajectory and assess whether its revenue performance is improving or deteriorating.

SECTION 02

BRANCH & CITY PERFORMANCE

Q7. Which branches contribute the most and least to overall company revenue?

Evaluate the company's overall financial performance, identify growth or decline trends, and understand whether the business is expanding or losing revenue over time.

Q8. How does revenue contribution vary across different cities?

Compare geographical sales performance, identify high-performing markets and uncover cities with potential for business improvement.

Q9. Which branches generate high revenue but have relatively low profit margins?

Identify branches that generate substantial sales but fail to convert revenue into proportional profit, highlighting potential operational or cost-efficiency issues.

Q10. Which branches show consistent revenue growth or decline over the analysis period?

Distinguish consistently growing branches from declining locations and identify branches that may require further performance investigation.

Q11. Which branches have the highest and lowest average transaction values?

Compare customer spending patterns across branches and identify locations with opportunities to improve average transaction value.

SECTION 03

PRODUCT CATEGORY PERFORMANCE

Q12. Which product categories generate the highest and lowest revenue?

Identify the major revenue-contributing categories and understand which categories play a smaller role in overall sales.

Q13. Which categories generate high revenue but have relatively low profit margins?

Identify categories with potential profitability issues and investigate opportunities to improve margins without necessarily increasing sales volume.

Q14. Which product categories contribute the most and least to total profit?

Understand which categories contribute most to the company's profitability and help management prioritise profitable product segments.

Q15. Which categories have the highest sales volume but contribute relatively less revenue?

Identify high-volume, relatively low-value categories and evaluate opportunities to improve revenue generation through pricing or product-mix strategies.

Q16. Which product categories are driving revenue growth or decline between 2022 and 2023?

Identify the categories responsible for changes in annual revenue and help management understand which product segments are gaining or losing sales momentum.

Q17. Which product category receives the highest average customer rating in each branch?

Identify customer-favoured categories across branches and understand differences in customer satisfaction at the product-category level.

Q18. What are the average, minimum and maximum customer ratings for each category across different cities?

Evaluate variations in customer satisfaction across geographical markets and identify categories or cities where customer experience may require improvement.

SECTION 04

CUSTOMER BEHAVIOUR & PAYMENT PREFERENCES

Q19. How do customer payment preferences vary across different branches?

Understand differences in payment behaviour across locations and help management make branch-level payment options and customer experiences more convenient.

Q20. Which payment methods generate the highest number of transactions and total quantity sold?

Identify the most frequently used payment methods and understand their contribution to transaction activity and sales volume.

Q21. What is the most commonly used payment method in each branch?

Identify the preferred payment method at individual branches to support location-specific payment planning.

Q22. Is there any relationship between customer ratings and category-level revenue?

Investigate whether customer satisfaction and revenue performance move together and identify categories that may require improvements in customer experience.

Q23. Do higher-rated product categories also generate higher revenue?

Compare category rankings based on customer ratings and revenue to understand whether customer-favoured categories are also commercially successful.

SECTION 05

TIME-BASED & TRANSACTION ANALYSIS

Q24. Which hours of the day generate the highest revenue and transaction volume?

Identify peak sales hours and understand when customer demand is highest to support staffing, operational scheduling and resource allocation.

Q25. How does sales performance differ between weekdays and weekends?

Compare customer purchasing activity across weekdays and weekends to identify differences in demand and opportunities for targeted sales initiatives.

Q26. Which day of the week has the highest transaction volume for each branch?

Identify branch-specific busy days and support better workforce planning and operational resource allocation.

Q27. How many transactions and how much revenue are generated during each shift (Morning, Afternoon and Evening) across different branches?

Compare sales and transaction activity across shifts to understand workload distribution and identify shifts that contribute most to branch performance.

Q28. Which time periods consistently generate the highest sales across branches?

Identify common high-performing time slots across the branch network and determine opportunities for standardising staffing and sales strategies.
